## SUBJECT INDEX

Acousto-optic signal pattern recognition, radio frequency (RF), 139
Antenna data, holographic processing of wideband, 130
Application of optical filtering to geophysics mapping and remote sensing, 83
Approach to optical pattern recognition systems, a generalized, 146
Autocorrelation of diffuse surfaces, optical, 50
Automatic optical printed circuit board (PCB) inspector, the Inspectron: an, 37
Average filters to produce discriminant hypersurfaces, optical pattern recognition using, 77

Board (PCB) inspector, the Inspectron: an automatic optical printed circuit, 37

Circuit board (PCB) inspector, the Inspectron: an automatic optical printed, 37
Classification invariant to selectable pattern features, optical pattern recognition and, 120
Classification and spatial pattern recognition, spectral feature, 17
Coherent optical pattern recognition, image registration and differencing by, 69
Coherent optical pattern recognition system for optical word recognition on a microfilm data base, 9

Data base, coherent optical pattern recognition system for optical word recognition on a microfilm, 9
Data, holographic processing of wideband antenna, 130
Data processing, implicit sampling in optical, 100
Data processing liquid crystal light valve, optical, 122
Deterministic aspects of multisensor optical image pattern recognition, statistical and, 58
Device for optical pattern recognition, use of the thermoplastic, 125
Differencing by coherent optical pattern recognition, image registration and, 69
Diffraction pattern sampling, optical pattern recognition by, 2
Diffuse surfaces, optical autocorrelation of, 50
Discriminant hypersurfaces, optical pattern recognition using average filters to produce, 77

Enhancement using noncoherent optical processing, feature, 95

Feature classification and spatial pattern recognition, spectral, 17
Feature enhancement using noncoherent optical processing, 95
Features, optical pattern recognition and classification invariant to selectable pattern, 120
Filtering, generalized matched, 115
Filtering to geophysics mapping and remote sensing, application of optical, 83
Filters to produce discriminant hypersurfaces, optical pattern recognition using average, 77
Frequency (RF) acousto-optic signal pattern recognition, radio, 139

Generalized approach to optical pattern recognition systems, a, 146
Generalized matched filtering, 115
Geophysics mapping and remote sensing, application of optical filtering to, 83

Holographic processing of wideband antenna data, 130
Hybrid pattern recognition research at the U. S. Army Engineer Topographic Laboratories, 27
Hypersurfaces, optical pattern recognition using average filters to produce discriminant, 77

Image pattern recognition, statistical and deterministic aspects of multisensor optical, 58
Image registration and differencing by coherent optical pattern recognition, 69
Implicit sampling in optical data processing, 100
Inspector, the Inspectron: an automatic optical printed circuit board (PCB), 37
Inspectron: an automatic optical printed circuit board (PCB) inspector, the, 37
Invariant moments, optical pattern recognition using normalized, 107
Invariant to selectable pattern features, optical pattern recognition and classification, 120

Light valve, optical data processing liquid crystal, 122
Liquid crystal light valve, optical data processing, 122

Mapping and remote sensing, application of optical filtering to geophysics, 83
Matched filtering, generalized, 115
Microfilm data base, coherent optical pattern recognition system for optical word recognition on a, 9
Microscopic objects, pattern recognition of, 65
Moments, optical pattern recognition using normalized invariant, 107
Multisensor optical image pattern recognition, statistical and deterministic aspects of, 58

Noncoherent optical pattern recognition, 90
Noncoherent optical processing, feature enhancement using, 95
Normalized invariant moments, optical pattern recognition using, 107

Objects, pattern recognition of microscopic, 65
Optical autocorrelation of diffuse surfaces, 50
Optical data processing, implicit sampling in, 100
Optical data processing liquid crystal light valve, 122
Optical filtering to geophysics mapping and remote sensing, application of, 83
Optical image pattern recognition, statistical and deterministic aspects of multisensor, 58
Optical pattern recognition and classification invariant to selectable pattern features, 120
Optical pattern recognition by diffraction pattern sampling, 2
Optical pattern recognition, image registration and differencing by coherent, 69
Optical pattern recognition, noncoherent, 90
Optical pattern recognition system for optical word recognition on a microfilm data base, coherent, 9
Optical pattern recognition systems, a generalized approach to, 146
Optical pattern recognition, use of the thermoplastic device for, 125
Optical pattern recognition using average filters to produce discriminant hypersurfaces, 77
Optical pattern recognition using normalized invariant moments, 107
Optical printed circuit board (PCB) inspector, the Inspectron: an automatic, 37
Optical processing, feature enhancement using noncoherent, 95

(PCB) inspector, the Inspectron: an automatic optical printed circuit board, 37
Pattern features, optical pattern recognition and classification invariant to selectable, 120
Pattern recognition and classification invariant to selectable pattern features, optical, 120
Pattern recognition by diffraction pattern sampling, optical, 2
Pattern recognition, image registration and differencing by coherent optical, 69
Pattern recognition of microscopic objects, 65
Pattern recognition, noncoherent optical, 90
Pattern recognition, radio frequency (RF) acousto-optic signal, 139
Pattern recognition research at the U. S. Army Engineer Topographic Laboratories, hybrid, 27
Pattern recognition, spectral feature classification and spatial, 17
Pattern recognition, statistical and deterministic aspects of multisensor optical image, 58
Pattern recognition system for optical word recognition on a microfilm data base, coherent optical, 9
Pattern recognition systems, a generalized approach to optical, 146
Pattern recognition, use of the thermoplastic device for optical, 125
Pattern recognition using average filters to produce discriminant hypersurfaces, optical, 77
Pattern recognition using normalized invariant moments, optical, 107
Printed circuit board (PCB) inspector, the Inspectron: an automatic optical, 37
Processing, feature enhancement using noncoherent optical, 95
Processing, implicit sampling in optical data, 100
Processing liquid crystal light valve, optical data, 122
Processing of wideband antenna data, holographic, 130

(RF) acousto-optic signal pattern recognition, radio frequency, 139
Radio frequency (RF) acousto-optic signal pattern recognition, 139
Recognition and classification invariant to selectable pattern features, optical pattern, 120
Recognition by diffraction pattern sampling, optical pattern, 2
Recognition, image registration and differencing by coherent optical pattern, 69
Recognition of microscopic objects, pattern, 65
Recognition, noncoherent optical pattern, 90
Recognition, radio frequency (RF) acousto-optic signal pattern, 139
Recognition research at the U. S. Army Engineer Topographic Laboratories, hybrid pattern, 27
Recognition, spectral feature classification and spatial pattern, 17
Recognition, statistical and deterministic aspects of multisensor optical image pattern, 58
Recognition system for optical word recognition on a microfilm data base, coherent optical pattern, 9
Recognition systems, a generalized approach to optical pattern, 146
Recognition, use of the thermoplastic device for optical pattern, 125
Recognition using average filters to produce discriminant hypersurfaces, optical pattern, 77
Recognition using normalized invariant moments, optical pattern, 107
Registration and differencing by coherent optical pattern recognition, image, 69
Remote sensing, application of optical filtering to geophysics mapping and, 83

Sampling in optical data processing, implicit, 100
Sampling, optical pattern recognition by diffraction pattern, 2
Selectable pattern features, optical pattern recognition and classification invariant to, 120
Signal pattern recognition, radio frequency (RF) acousto-optic, 139
Spatial pattern recognition, spectral feature classification and, 17
Spectral feature classification and spatial pattern recognition, 17

Statistical and deterministic aspects of multisensor optical image pattern recognition, 58
Surfaces, optical autocorrelation of diffuse, 50
Systems, a generalized approach to optical pattern recognition, 146

Thermoplastic device for optical pattern recognition, use of the, 125

U. S. Army Engineer Topographic Laboratories, hybrid pattern recognition research at the, 27
Use of the thermoplastic device for optical pattern recognition, 125

Valve, optical data processing liquid crystal light, 122

Wideband antenna data, holographic processing of, 130
Word recognition on a microfilm data base, coherent optical pattern recognition system for optical, 9
